

# SECTOR LEARNING SOLUTIONS

---

*Implementation of the most efficient VDI solution to a dynamic environment that requires frequent rapid deployments of Windows operating systems.*

*Connecting Knowledge with Need*

## *Business Challenge*

Sector's in-house classroom is constantly turned over between different versions of Windows and Office to meet training requirements. Historically, the computers were re-imaged through a time-consuming process that required manual intervention for each machine. As the business grows and the classroom gets busier, this process incurs more and more overhead.

## *The Solution: VDI-In-A-Box*

VDI-In-A-Box offers the best mix of features and ease of management for a VDI solution. As a product in the Citrix stable, full use of the ICA and HDX protocols are included, resulting in a rich multimedia experience either locally or across the WAN.

The installation of the management appliance and the creation of the master images are both simple and painless. With just a single appliance to manage all aspects of desktop delivery, desktop images can be created, updated, rolled back and enabled/disabled rapidly and painlessly. Users can utilize one or several desktop images on-the-fly.

## *The Result*

Prior to the deployment of VDI-In-A-Box, it took hours of effort to re-image the computers in Sector Learning's classroom. With VDI-In-A-Box, the deployment is instantaneous, and simply requires changing some settings within the single appliance. In addition, multiple images and operating systems can be run at the same time, and remote users can join the learning session.

VDI-In-A-Box has dramatically lowered management time, reduced complexity, provided flexibility and dramatically sped up performance in the classroom environment.
